

1standard power scale pv distribution for field operations

Overview

This document examines the representation of BPS-connected solar PV plants in both power flow and dynamic data sets for BPS studies. Abstract—The rapid deployment of large numbers of utility-scale photovoltaic (PV) plants in the United States, combined with heightened expectations of future deployment, has raised concerns about land requirements and associated land-use impacts. The document outlines modeling techniques for all solar PV resources in the transmission and distribution systems. It also shows best practices for model validation. with the basics of cost-of-energy analysis. Solar industry practitioners will also review design and equipment procurement considerations to reduce risk for asset owners, along with how and when to incorporate storage i o the project development planning process. Mahesh Morjaria, Kevin Collins, Michael Stavish of First Solar and Greg Ball of DNV-KEMA Renewables explore some of the challenges associated with the uc-ing the cost of utility-scale PV plants and in making solar.
