

Cape town phase change energy storage project

Overview

The City of Cape Town has announced that it has opened bidding to potential tenderers to construct a battery energy storage facility. The facility will be constructed at the City's Atlantis Solar PV plant, targeting a minimum rated power output of 5MW and a useable energy. The Hex BESS is the first project to be completed under Eskom's flagship BESS project announced in July 2022 to help alleviate the pressure on the national electricity grid. The BESS project serves as a direct response to meet one of the urgent needs to address South Africa's long-running, been an unprecedented escalation in load-shedding. While the City of Cape Town has been able to protect City supply area customers from up to two stages of load-shedding, the current levels are severely disruptive to the local economy, its future growth and essses, and the environment for future. The City of Cape Town will,in the third quarter of this year,release an RFP for 100MW of battery energy storage systems in an effort to bolster energy security.
