

Distributed solar energy storage requirements

Overview

IEEE 1547 provides mandatory functional technical requirements and specifications, as well as flexibility and choices, about equipment and operating details that are in compliance with the standard. Two ways to ensure continuous electricity regardless of the weather or an unforeseen event are by using distributed energy resources (DER) and microgrids. 9 The Institute of Electrical and Electronics Engineers (IEEE) Standard 1547 has been a foundational document for the interconnection of distributed energy resources (DER) with the electric power. The energy landscape is evolving rapidly, spurred by the rise of distributed energy resources (DERs) like solar panels, wind turbines, and battery storage. These technologies provide opportunities for localized energy production, enhancing resilience and sustainability.
