

Energy Efficiency Comparison of 20kW Communication Power Supply Racks

Overview

Alternatives for providing electrical power to high density racks in data centers and network rooms are explained and compared. Leading brands like ESTEL, Schneider Electric, Eaton, Vertiv, and Raritan offer cutting-edge features such as real-time monitoring, outlet-level control, and seamless compatibility with IT equipment. With the market projected to grow from \$3. 27 billion in 2025. Better Space Use: High-density racks reduce the number of racks needed. Several factors increase demand for high-density colocation: Cloud Growth: AWS, Microsoft Azure, and Google. 20kW modular 3-phase UPS that includes power distribution and maintenance bypass in one NetShelter cabinet. Adding run time. Power Usage Effectiveness (PUE) is the industry's key metric for energy efficiency, showing how much total facility energy is used by IT equipment versus supporting infrastructure. To meet the need for improved efficiency, lower operating and lower BOM costs, there is renewed interest in WBG (Wide Bandgap) solutions. Over recent years, the average rack density densities were already high, with an average power density even higher power, with some configurations reaching up to 50 kW per rack.
