

## High-efficiency inverter cabinets used in railway stations

### Overview

By installing thyristor inverters in substations of DC systems, a feeding back of recovered braking energy into the public mains becomes a possibility. This can considerably increase recuperation rates in suburban or regional DC systems. In railway application Multi-Level Inverter (MLI) used to reduce Electro Magnetic Interference (EMI) increasing efficiency of the system. This paper discusses. The global railway sector's shift toward electrification and energy efficiency is a dominant driver for DC/AC inverter adoption. Designed for connection directly to the train auxiliary supply, the inverters incorporate surge and transient filtering ensuring compliance with both the traditional and. ABB Drives is a global technology leader serving industries, infrastructure and machine builders with world-class drives, drive systems and packages.
