

How big a lithium battery should a 48v power frequency inverter be equipped with

Overview

Note!The battery size will be based on running your inverter at its full capacity
 Assumptions 1. Modified sine wave inverter efficiency: 85% 2. Pure sine wave inverter efficiency:90% 3. Lithium Battery:100% Depth of discharge limit 4. lead-acid Battery:50% Depth of discharge limit Instructions!. To calculate the battery capacity for your inverter use this formula Inverter capacity (W)*Runtime (hrs)/solar system voltage = Battery Size*1.15 Multiply the result by 2 for lead-acid type. You would need around 24v150Ah Lithium or 24v 300Ah Lead-acid Batteryto run a 3000-watt inverter for 1 hour at its full capacity Related Posts 1. What Will An Inverter Run & For How Long?
