

# Hybrid Futures for Data Center Battery Cabinets Used in Charging Piles

## Overview

As renewable energy and electric vehicle adoption surge globally, charging pile lithium battery energy storage cabinets have emerged as critical infrastructure. To help industry professionals navigate these changes, ZincFive and Data Center Frontier have collaborated to produce this report, offering insights into the current landscape and future trends as predicted by their peers. Featuring contributions. The Battery Energy Storage System (BESS) market is going through a coming-of-age moment, having grown exponentially over recent years. According to Wood Mackenzie, it has seen a 44 percent expansion in 2024, with more than 69GW of new BESS capacity installed globally. Despite the growth, the role. In 2024, ABB introduced nickel-zinc batteries (NiZn) into its MegaFlex uninterruptible power supply (UPS) lineup, specifically targeting data centers' energy challenges. Data centers require the utmost power stability to operate. Key market opportunities in data center energy storage involve the adoption of lithium-ion and solid-state batteries, AI-driven energy management systems, and hybrid solutions with renewables. Massive opportunity across every level of the market, from residential to utility, especially for long duration.
