

Principle of variable pitch battery cabinet

Overview

The construction characteristics of the recombination type lead-acid electric accumulators (valve-regulated hermetic accumulators); the absence of acid fumes and the virtual absence of gaseous development allows it to be installed in suitable containment cabinets. The invention relates to the technical field of battery module assembly, in particular to an automatic assembly system for a variable-pitch battery module. The automatic feeding and discharging mechanism comprises an inclined rail feeding mechanism, a material taking mechanism, a deformation. Handles - provides an easy way to handle the battery cabinet. Cooling plates - some have cooling plates that help to control the enclosure temperature. Insulation system- insulation is also a safety. Every cabinet, such as freight elevators, pallet jacks and forklifts. (Fully extend works under load. Wear safety can be very dangerous and have extremely high short circuit current.
